Welcoming the da Vinci 5 surgical system to our hospital

01 Tower

Houses processors and intelligently integrated components.

Tower includes:

- 4K monitor
- E-200 generator
- Insufflator
- Handheld camera
- Endoscope with 785nm Firefly® imaging and tip heater

02 Console

An immersive, ergonomically adjustable console with our best-ever 3DHD vision.

Console includes:

- Intuitive Hub
- Case Insights with one-year trial
- Integrated SimNow*

03 Patient cart

Similar form factor to da Vinci Xi, internally redesigned for added functionality.

Patient cart includes:

- Patient table with Integrated Table Motion

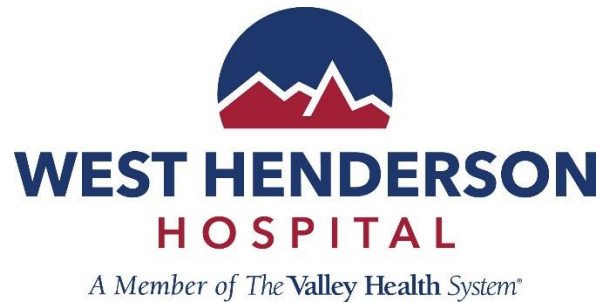

Patient Benefits of a da Vinci 5:

Smoothest, most-precise system the company has developed to date.

Improved 3D display and imaging processing so your physician can see even more

In pre-clinical trials, force-sensing technology demonstrated 43% less force on tissue

Designed for improved comfort for surgeons

Sustainability Initiatives

1. The building was designed with **energy efficient glass, lighting, and air conditioning**, which helps keep the building more comfortable and reduces annual energy bills.
 - a. The building is expected to qualify for energy-efficiency rebates from the local utility because of the high-performing design and good energy performance.
2. **Low-VOC materials** were required throughout the interior, which helps eliminate or reduce harmful chemicals inside the building shell. This makes for healthier spaces.
3. **Advanced air filtration systems** keep the air clean and healthy indoors.
4. The building was designed for patient comfort and well-being: **Daylight and views to the outdoors** are provided along with **thermostat controls for every recovery room**.
5. **Drought-tolerant landscaping** was used around the site to preserve the desert habitat and avoid large irrigation demands.
6. The contractor implemented an **indoor air quality management plan throughout construction to keep the building clean and remove unwanted air contaminants**. The contractor, SR Construction, successfully diverted more than half of all construction waste from landfills (58% recycle rate).
7. The project is **pursuing Green Globes certification through the Green Building Initiative to certify the building's environmental performance across several dimensions including energy, water, waste, interior amenities, emissions, and land use**. The Project expects to receive certification shortly before first occupancy.

Interesting Facts

Construction

14 miles of ductwork installed for HVAC system

11 miles of piping installed for HVAC system

Almost 40 miles of plumbing pipe installed

The hospital is already master-planned to expand to 450 beds

The 7-story tower is built out. The 5-story tower has shell space for another 90 beds (floors 3-5)

Special Features

Dedicated elevator from the ER directly to the Cardiac Cath Lab to accelerate care

All inpatient rooms are the same size – just the doors are different - ICU & IMC are clear.

UV lighting is located in every ER bay, surgical suite and procedural room (gastroenterology, catheterization lab, interventional radiology lab and electrophysiology lab), and turns on when no one is in the room.

The ambulance bay is designed for an easier entry and exit for all EMS rigs.
